

True Potential Cautious Portfolio

Portfolio Objective

The objective of the True Potential Cautious Portfolio is to provide investors with a way to achieve their investment goals. The Portfolio offers full exposure to different manager styles within the Cautious risk profile. We review the Portfolio monthly and, if necessary, rebalance to the allocation of styles that we believe offers the best opportunity for growth within the Cautious risk profile. The Portfolio aims to produce a higher risk-adjusted outcome at a lower average cost, compared to an equally-weighted model of Cautious funds.

Risk Profile: Cautious

The Cautious Investor may be sensitive to short-term losses. A Cautious Investor's potential aversion to losses could compel them to shift into a more stable investment if significant short-term losses occur. Analysing the risk-return choices available, a Cautious Investor is usually willing to accept somewhat lower returns in order to assure greater safety of his or her investment.

Investment Commentary

The True Potential Cautious Portfolio returned +2.28% in March 2024, net of Portfolio OCF.

Both equities and bonds, the key building blocks of the True Potential Portfolio proposition, provided positive returns during the month. The global equity index marked its fifth consecutive month of positive returns. Equity market moves reflected evidence that while the US economy shows continued resilience, economic growth outside of the US is also firming. In Europe and the UK, inflation pressures continue to ease rapidly whilst economic growth indicators rebounded. The UK and Europe provided the highest equity returns regionally. Fixed income, although positive, underperformed equities. Within sovereign bonds, UK gilts fared well, with longer dated paper achieving the strongest returns. Generally positive risk appetite and declining default expectations buoyed returns from European and US investment grade and high yield corporate credit markets.

Within the portfolio, the strongest performing funds were the True Potential Schroder and True Potential UBS funds. Schroder benefited from its large allocation to UK equities and exposure to both physical gold and gold mining equities. UBS benefited from their momentum and value factor positions, both outperforming the broad equity market. In fixed income, the longer maturity government bond positioning was beneficial as yields fell.

Over the period, no changes were made to the Portfolio manager allocations after agreement that the allocations are optimally positioned in line with our longer-term market outlook, however changes have been made at the underlying fund level. Examples include additions to European equities, where lower valuations are seen as attractive, as well as to lower quality corporate bonds with managers looking to access the high yields on offer given increasing confidence on the economic environment.
